

## Research Position in Chemical Biology

We are calling for applications from highly motivated individuals to conduct research at the level of masters or as a paid internship in the Laboratory of Molecular Neurobiology and Neuroproteomics at the Swiss Federal Institute of Technology in Lausanne (EPFL), Switzerland (<http://nmnf.epfl.ch>) . The qualified individual will work as a member of an interdisciplinary group working at the interface of chemistry and biology and will gain hands-on experience in peptide chemistry, protein/peptide purifications, and biophysical techniques including circular dichroism, fluorescence spectroscopy and chromatography techniques. Research efforts will focus on the development chemical and physical approaches to control protein mis-folding and aggregation to elucidate the molecular basis of neurodegenerative diseases. Previous experience in peptide chemistry and protein folding is desired but not required. . Candidates with strong background in chemistry are encouraged to apply. Interested candidates are invited to submit their CV and letter of interest to: [hilal.lashuel@epfl.ch](mailto:hilal.lashuel@epfl.ch)
